Listing et explications des cookies

WordPress Cookies

- **wordpress_[hash] :** On login, wordpress uses the wordpress_[hash] cookie to store your authentication details. Its use is limited to the admin console area.
- **wordpress_logged_in_[hash] :** After login, wordpress sets the wordpress_logged_in_[hash] cookie, which indicates when you're logged in, and who you are, for most interface use.
- **wp-settings-{time}-[UID] :** WordPress also sets a few wp-settings-{time}-[UID] cookies. The number on the end is your individual user ID from the users database table. This is used to customize your view of admin interface, and possibly also the main site interface.
- **wordpress_test_cookie :** Tests whether or not the browser has cookies enabled.

The actual cookies contain hashed data, so you don't have to worry about someone gleaning your username and password by reading the cookie data. A hash is the result of a specific mathematical formula applied to some input data (in this case your user name and password, respectively). It's quite hard to reverse a hash (bordering on practical infeasibility with today's computers). This means it is very difficult to take a hash and "unhash" it to find the original input data.

WordPress uses the two cookies to bypass the password entry portion of wp-login.php. If WordPress recognizes that you have valid, non-expired cookies, you go directly to the WordPress Administration interface. If you don't have the cookies, or they're expired, or in some other way invalid (like you edited them manually for some reason), WordPress will require you to log in again, in order to obtain new cookies.

Google Analytics

- **_gat :** This cookie has a ten minute timeout. This cookie does not store any user information, it's just used to limit the number of requests that have to be made to **doubleclick.net**
- **_ga :** This cookie has a 2 years timeout. Used to distinguish users.
- **_gid :** This cookie has a 24 hours timeout. Used to distinguish users.
